

**Exercises extrapolated from the text
for the purpose of culturing
our understanding
of Life**

Life/Mind

The Life of Being is the origin of all existence

The Mind of Life is the cause of existence
is the originator of life
is the generator of all that is
is the creator of being

therefore: nothing else causes, originates, generates or creates life
no other law, no other power, no other codes of information

consequently: there is no genetic causation, origination, generation or creation
no morphogenetic causation, origination, generation or creation
of life (any life, our life, that which appears as my life)

only that which is encoded by Life
only that which developed in Life's well
only that which embodies the fundamental elements of Life
only that which is generated by Life
only that which is animated by Life
only that which gives full evidence of Life
only that creation which is Life's creation

any other creation is a mirage condemned to oblivion the
instant it is recognized as such. Let that instant be now!

Let Life's code be the only code that is manifest in me
Let Life's spiritual substance be the only substance that develops in me
Let Life's fundamental elements be the only elements embodied in me
Let Life's model be the only model generated in me
Let Life's being eternally animate me
Let Life's form evidence in me
Let Life's perfection determine the living patterns of my being

May the Life of Being ever reveal my true origin
May it retranslate the genetic, morphogenetic origins of my existence back to its divinity
May Life give evidence of me as I truly am
May I rediscover myself as the perfect creation of Life, of Being

accepting that all, including that which appears as me, is the creation of

an omnipotent eternal creator
an omniscient divine creating
evidencing as
an omnipresent supreme creation
an omniorganizing infinite being

Life/Spirit

All exists in an eternal, timeless now

therefore:

Nothing in "me" "we" "all" desires to look back
Nothing in "me" "we" "all" focuses on that which seemed to come before
Nothing in "me" "we" "all" resonates with that which seemed to come before
Nothing in "me" "we" "all" aligns with that which seemed to come before
Nothing in "me" "we" "all" lives in the past
Nothing in "me" "we" "all" conforms to the past
Nothing in "me" "we" "all" patterns itself in accordance with the past

Everything in "me" "we" "all" desires the now, the present timelessness
Everything in "me" "we" "all" focuses in the now
Everything in "me" "we" "all" resonates in the now
Everything in "me" "we" "all" centers in the now
Everything in "me" "we" "all" lives in the now
Everything in "me" "we" "all" forms in the now
Everything in "me" "we" "all" patterns in the now

not in the past or in the future, but in the ever present, eternal now
not in time, but in timelessness

Everything in "me" "we" "all" is open to new ideas, new information
Everything in "me" "we" "all" is open, receptive, adaptive to new attachments
Everything in "me" "we" "all" is open to a new and enriched sense of itself
Everything in "me" "we" "all" is open to reorganizing; to totally restructuring
Everything in "me" "we" "all" is open to new life; to new expressiveness
Everything in "me" "we" "all" is open to new forms; to conforming anew
Everything in "me" "we" "all" is open to new patterns; is holographically adaptive

Nothing in "me" "we" "all" is programmed by the past or programs its future
Nothing in "me" "we" "all" clings to the past or to a self created future
Nothing in "me" "we" "all" psychically embodies the past or projects its selfhood
onto the future
Nothing in "me" "we" "all" is controlled by the past or tries to control the future
Nothing in "me" "we" "all" lives in the past or attempts to live beyond the timeless
eternal now
Nothing in "me" "we" "all" is stuck in a past paradigm of consciousness or has
projected itself into a state beyond the eternal now
Nothing in "me" "we" "all" rejects eternal nowness or feels itself cut off from it

But lives in a state in which LIFE in and of SPIRIT is the only life there is

ever springing forth from an omnipotent source; a Self existing spring
ever flowing freely in the transparency of omniscient consciousness
expressing in the omnipresence of an all inclusive, all embracing continuum
eternally overforming, restructuring, remodeling as its ongoing mode of Life

Life/Soul

All exists in a non-local continuum in which here is everywhere and everywhere is here

Life is impelling all/us/me to recognize its newness as it floods our/my being and experience
Life is impelling all/us/me to receive its newness as it floods our/my being and experience.
Life is impelling all/us/me to entrain with its newness as it floods our/my being and experience.
Life is impelling all/us/me to assimilate its newness as it floods our/my being and experience.
Life is impelling all/us/me to convert in accord with its newness as it floods our/my being & experience
Life is impelling all/us/me to take on the form of its newness as it floods our/my being & experience.
Life is impelling all/us/me to accept the full presence of its newness as it floods our/my being & exp.

Let it be so. Let us/me recognize the new as Life impels it onto the horizon of our being and experience
receive
entrain with
assimilate
convert in accord with
take on the form of
accept the full presence of

It is.

Ever has it been.

Ever will it be that we/all recognize, receive, entrain with, assimilate, convert in accord with, take on the form of, accept the full presence of Life's newness as it floods the horizon of our being.

In so doing we are privy to this newness, experiencing it in concert with every other expression of Life.

Let us/me enter that supreme realm beyond the parameters of the morphic field
beyond the imposition of its memory
beyond the constructs of 3 dimensional space/time
beyond gravity and electromagnetism
that unified continuum in which all the forms of life cohere as a vital holographic community

Let us/me live in this boundless realm
this unified holographic community in which all receive the influx of Life simultaneously.

Let us/me live in this non-local realm in which we have no need of psychic or physical conductors
for here is everywhere and everywhere is here.

We can. We do.

Ever has it been so.

In actuality we/I live in a unified holographic community beyond the gravitational and electromagnetic forces of three dimensional space/time, receiving the influx of Life's newness simultaneously with every other form of life in the universe.

We know this.

We feel this.

We sense this.

We exist in this boundless realm of being now and forever.

Life/Principle

The grand superforce of the Principle of Life eternally empowers the seven fold nature of Life: the Mind, Spirit, Soul, Principle, Life, Truth, Love of Life, utilizing the four fold circuitry of its operative system: the omnipotent, omniscient, omnipresent, omni-modeling system of its being.

The grand superforce of Life's Principle	is empowering is activating is creating is initiating is shaping is illuminating	Life; all life, our life, my life
The grand superforce of Life's Principle	is substantiating is unfolding is developing is strengthening is reflecting	Life; all life, our life, my life
The grand superforce of Life's Principle	is objectifying is stabilizing is balancing is resonating is characterizing	Life; all life, our life, my life
The grand superforce of Life's Principle	is organizing is operating is governing is regulating is aligning is harmonizing	Life; all life, our life, my life
The grand superforce of Life's Principle	is vitalizing is imparting is energizing is impelling is providing is eternalizing	Life; all life, our life, my life
The grand superforce of Life's Principle	is formulating is factualizing is calculating is altering is idealizing	Life; all life, our life, my life
The grand superforce of Life's Principle	is designing is planning is integrating is fulfilling is blessing is enriching is giving purpose to	Life; all life, our life, my life

therefore: no other power is accomplishing these ends; no personal power, effort. Only the power of Life's Principle charges Life, all life, our life, my life.

LIFE/PRINCIPLE

The Principle of Life

is forever organizing
is forever structuring
is forever systematizing

life/isness/being
life/isness/being
life/isness/being

The law invoking Principle of Life

The ordering Principle of Life

The reigning Principle of Life

is empowering the life

is empowering the formation
is empowering the synergy
is empowering the inner calculus

is empowering the designing
is empowering the patterning/planning
is empowering the integrated being
is empowering the perfection

EXPLORING THE PRINCIPLE OF LIFE

The Principle of Life

is an incorporeal, divine, supreme and infinite Principle, an omnipotent, omniscient, omnipresent, omnimodeling Principle which eternally organizes Life into a model, a model of being.

The driving force of the Principle of Life, the deep Superforce, reflecting the omnipotent, omniscient, omnipresent and omnimodeling capacity of its Principle, enables Life to be, to exist, to live. It is the motive force at the core of the structure of Life, at the core of the interrelationships through which the model of life is formed. It is at the helm of the system of Life, steering the operation of its divine circuitry, its cybernetics. It alone controls and governs the universe of Life's expression, the universe of its experience by assuring that it is always initiated by its Life/Principle, found in its Life/ Principle, wed with its Life/Principle, is one with its Life/Principle, and that it cannot interpret itself otherwise, cannot interpret itself as existing outside of its Life/Principle, outside of the Science of Life which gives it conscious scientific understanding.

The Superforce of Life

is thereby responsible for the structure of Life; Being the system of Life; Being the Science of Life; Being

enabling them to reflect its incorporeal, divine, supreme and infinite nature, the omnipotence, omniscience, omnipresence and total coherency of its principled being.

thereby:

The Superforce of Life:

empowers and activates	the structure, system and Science of Life; Being
gives substance and strength to	"
gives equilibrium and stability to	"
gives indivisibility and self-government to	"
gives existence, indestructibility and inexhaustibility to	"
gives form (gestalt) to	"
gives design, integration and self-sufficiency to	"

spontaneously, effortlessly, naturally, automatically, continuously

As such it empowers, strengthens, stabilizes, governs, animates, forms and integrates all life, all existence, all experience; our life, our existence, our experience; that which appears as 'my' individualized life, existence, experience. And there is no other force that can empower, strengthen, stabilize, govern, animate, form or design life (existence, experience); no other force which can influence life (existence, experience), impede the flow of life, (existence, experience), intrude upon life (existence, experience), alter the interpretation of life, (existence, experience) invert life (existence, experience) damage life (existence, experience) or end life (existence, experience).

There is only one Life Force

Life/Life

Infinite progression is the way of Life

Life	eternalizes	its being
Life	reveals	the infinite progression of its being
Life	impels	the infinite progression of its being
Life	impels	the infinite progression of all being
Life	impels	the infinite progression of our being
Life	impels	the infinite progression of my being
Life	mutates	its eternal creation
Life	mutates	its creation to ever higher states
Life	creates	newness
Life	brings	constant growth, change

thereby:

All existence is subject to being eternalized
All existence is subject to the infinite progressions of Life
All existence is subject to the divine impulsion of Life
All existence is subject to the mutation of Life
All existence is subject to the eternal creating of Life
All existence is subject to constant growth, change, evolution

This progression is absolute, imperative.
Thereby it is futile to resist, to hang back, to maintain the status quo.
Refusal to adapt to these progressive states causes that which refuses to
experience stagnation and decay, to take a backward slide into mortality,
into death.

To reverse this false experience we (and all) who exist need only to let go of our
grip on mortality: reconnect with the encoding of our divine genesis, live in the
timelessness of the now, the spacelessness of the omnipresent here, accede to the
government of Life's Principle, go with the flow of Life, progressing as it bids,
spontaneously adapting to the creative changes impressed upon our being

then:

Let it be so. Let Life impel us to new heights, new states of being.

It can. It does, enabling us to make conscious transitions, conscious adaptations.

Ever is it so. Ever do we (and all) receive the infinite progressions of Life.
Ever do we evidence these progressions in our existence, our experience.
Ever do we give full expression to the newness of Life. Ever are we new.

Life/Truth

Life is conscious
Life infuses its existence with the consciousness of its being
Life impels conscious transformation

Life is omniscient

Life is conscious

Life's progression is a conscious progression, a conscious transformation of being

Life is divine

Life's progression is a divine progression

Life progresses from ideal state to ideal state, every facet reconfiguring correctly

Life expresses as conscious existence, conscious being

infusing its existence, its being (all existence/being, our existence/being, my existence/being)
with the full radiance of its consciousness, forever recalculating the way its existence expresses
and experiences life.

thereby:

all that exists is heir to this conscious state of being
and cannot actually dim to the dream of mortality

we are heir to this conscious state of being
and cannot actually dim to the dream of mortality

I am heir to this conscious state of being
and cannot actually dim to the dream of mortality

Life, being conscious, must eternally maintain the awakened state of its existence
must eternally maintain the awakening of all, us, me
must fill the caverns of what appears to be our dormant understanding
infusing them with life, conscious progression, remodulated newness

thereby:

Life will not allow the seeming sleep of death to pervade being (all, our, my, any)

Life will not allow the seeming sleep of death to prevail in being.

All must awaken.

Life cannot condone or allow mortality.

All must reconfirm their conscious state of existence/being

All must consciously ascend the scale of Life's infinite progression

We must and do consciously ascend the scale of Life's infinite progression

I must and do consciously ascend the scale of Life's infinite progression
without resistance

undaunted, undefiled, unaffected by the schisms and half truths of life

Life cannot be destroyed. It is divine. It is eternal

Our life cannot be destroyed. It is divine. It is eternal.

All live in an ideal conscious state of being

We live in an ideal conscious state of being

I live in an ideal conscious state of being

Life/Love

Life multiplies the seed of its eternal creating through the instantaneous ubiquity of its supreme omnipresence

Life maintains the unity and solidarity of all being

Life embraces the entirety of its being within the womb of its well, the matrix of its being

Life maintains, sustains, supports, provides for, floods, gives to the entirety of its being within the womb of its well, within the matrix of its eternal being

Life preserves, protects, cares for, nurtures, enhances, embraces, maximizes the entirety of its being within the womb of its well, within the matrix of its eternal being

Life maintains
sustains
supports
provides for
floods
gives to

the unity and solidarity of all being

Life preserves
protects
cares for
nurtures
enhances
embraces
maximizes

all being, our being, my being

not allowing any part of being to withdraw itself from its universal presence, abdicate its right to amplify and magnify the ever evolving states of its isness.

Life exalts all (us) in the spiraling progressions of its supreme being.

Life amplifies and magnifies itself through the supreme presence of all.

Life amplifies and magnifies itself through our holographic presence

assuring our ascending existence, the exponential magnitude of our eternal being.

None can shrink back from amplifying and magnifying Life

All amplify and magnify Life forevermore

Life includes all (us) in its universal presence.

Life floods and nurtures all (us) with the superabundance of its presence

None can withdraw from the full presence of life, descending into the grave of mortality. None can take an endless free fall, experience extinction, death

All (we) live forevermore

experiencing the full bounty of life

the glory and splendor of life

the greatness of everlasting, ever repatterning being

Life's omnipresent being is our being

Life/Love

Life is universal being

Life is unlimited, ever present, expressing itself in the entirety of its universal being.
Life is ever revealing the seven fold nature of its being, establishing the being of all.
Life fills the universe with the totality of its being.

thereby:

Life fills all, us, me with the totality of its seven fold being.

thereby:

The omnipresence of Life	is alive	in all, in us, in me
The omnipresence of Life/7	is alive	in all, in us, in me
The omnipresence of Life	is consciously forming	in all, in us, in me
The omnipresence of Life/7	is consciously forming	in all, in us, in me
The omnipresence of Life	is holographically patterning	in all, in us, in me
The omnipresence of Life/7	is holographically patterning	in all, in us, in me
The omnipresence of Life	lives	in all, in us, in me
The omnipresence of Life/7	lives	in all, in us, in me

The omnipresence of Life/7 is resounding throughout the universe of being,
supplying all with that which it is, that which it does.

thereby:

no other presence of life	is alive	in all, in us, in me
no other presence of life	is consciously forming	in all, in us, in me
no other presence of life	is holographically patterning	in all, in us, in me
no other presence of life	lives	in all, in us, in me

Only that eternal, divine, supreme and infinite presence of Life
lives as all, as, us, as that which appears as me

Life is fully present
fully expressed
always

GLOSSARY

- big-bang** (superdense theory) The cosmological theory that all the matter and energy in the universe originated in a superdense agglomeration that exploded at a finite moment in the past. This theory successfully explains the expansion of the universe, the galaxies flying apart like fragments from an exploding bomb. (Concise Science Dictionary)
- calculus:** A method or process of reasoning by computation of symbols. (Webster's)
- category:** One of the underlying forms to which any object of experience must conform. A division within a system of classification. (Webster)
- classification:** Systematic arrangement in groups or categories according to established criteria. (Webster)
- chart:** A form designed to record or provide information quickly and simply especially about something fluctuating or changing; table, graph, diagram; a map; an outline map showing certain field conditions or facts. A graphic representation of reality.
- "The Chart":** The chart symbolizes the nature, the interrelations and the whole dynamics of spiritual Being; it is a model of divine cybernetics which includes the 15 root notions of spiritual Being: The seven synonymous terms for God, the fourfold operation of God and the four levels of spiritual consciousness through which the whole range of spiritual Being can be symbolized from the infinitesimal to the infinite.
(Kappeler: The four levels of spiritual consciousness)
- code:** A systematized body of law. A set of signals, characters, or symbols used in communication. (Funk & Wagnalls) The particular way in which information is entered into the computer.
- coding:** To systematize as laws. To put into the symbols of a code.
- coherence:** Systematic or logical connection or consistency. The integration of diverse elements, relationships or values. Being coherent. (Webster's)
- continuum:** A system of axes that form a frame of reference. The three dimensions of space and the dimension of time together can be taken to form a four-dimensional continuum; this was suggested by Minkowski in connection with special relativity. (Concise Science Dictionary)
- cybernetics:** Coined by Norbert Wiener from the Gk. Kybernetes: pilot, governor; and also from Kubernan: to steer, guide, govern. The study of systems which are self-regulating, self-controlling, self-operating through their feedback mechanism to exercise adaptive control. (Sc. of B. Study guide)
- The theoretical study of control processes in systems, especially the mathematical analysis of the flow of information in such systems. If an error in the system should appear, information about this error is fed back to the controlling device which then automatically acts to correct the error.

- encode:** To transfer (as a body of information) from one system of communication to another. To convert (a message) into code.
- energy:** Gk. activity + 'ergon' work The capacity for doing work. Dynamic power. The vigorous exertion of power: effort. The capacity of acting or being active. Usable power. (Webster) A measure of a systems ability to do work, classified in two forms, potential and kinetic. *Potential* energy is the energy stored in a body or system as a consequence of its position, shape, or state (this includes gravitational energy, electrical energy, nuclear energy, and chemical energy). *Kinetic* energy is energy of motion and is usually defined as the work that will be done by the body possessing the energy when it is brought to rest. The *internal energy* of a body is the sum of the potential and kinetic energy. (Concise Science Dictionary)
- energy level:** One of the stable states of constant energy that may be assumed by a physical system. Also called energy state. (Webster)
- enfold:** Embracing; encircling; to cause to be embraced endlessly; endless embracing.
- entropy:** The total energy content of the universe is constant and the total entropy is continually increasing; that it is impossible to either create or destroy energy. The amount of energy in the universe has been fixed since the beginning of time and will remain fixed till the end of time, and though it cannot be created or destroyed it can be transformed from one form to another. This is the first law of thermodynamics.
- The second law of thermodynamics states that every time energy is transformed from one state to another "a certain penalty is exacted." That penalty is a loss in the amount of available energy to perform work of some kind. This is called entropy. In other words it is the conversion of energy to unusable forms.
- field:** A region of physical influence. Fields interrelate and interconnect matter and energy within their realm of influence. Fields are not a form of matter; rather, matter is energy bound within fields. In current physics, several kinds of fundamental fields are recognized: the gravitational and electromagnetic fields and the matter fields of quantum physics. The hypothesis of formative causation broadens the concept of physical fields to include
- morphic** fields as well as the known fields of physics.
- As applied to the Science of Being: A realm of spiritual influence; the objective realm of divine expression.
- form:** The shape, configuration, or structure of something as distinguished from its material.
- formative causation:** The hypothesis that organisms or morphic units (q.v.) at all levels of complexity are organized by morphic fields, which are themselves influenced and stabilized by morphic resonance (q.v.) from all previous similar morphic units. (Rupert Sheldrake: The Presence of the Past)

- General Theory of Relativity:** A scientific theory which describes the force of gravity and the large scale structure of the universe. (Brief History of Time: Steven Hawking)
The fundamental postulate of the theory of relativity: the laws of science should be the same for all freely moving observers, no matter what their speed. All observers should measure the same speed of light, no matter how fast they are moving. The equivalence of mass + energy. $E=mc^2$ (E is energy, M is mass + C is the speed of light) Law: Nothing may travel faster than the speed of light. Because of the equivalence of energy and mass the energy which an object has due to its motion will add to its mass. i.e. it will make it harder to increase its speed. (Einstein) The theory put an end to absolute time.
- genetic program:** A program is a plan of intended proceedings, as in a concert or computer program. The concept of the genetic program implies that organisms inherit plans of intended proceedings; these plans are assumed to be carried in the genes. (Rupert Sheldrake: The Presence of the Past)
- gestalt:** A structure or configuration . . . so integrated as to constitute a functional unit with properties not derivable from its parts in summation.
The pattern or figure assumed by a gestalt structure or system. (Websters)
- Grand Unified Field Theory:** An attempt to discover a single interaction at the heart of the universe, one that will explain all of the phenomena that surrounds us. To unite the four basic rules of nature, gravity (which controls the biggest objects in the universe- the stars, the planets, you and me), with the three other forces which operate at the subatomic level: the strong nuclear force, (trillions of times more powerful than gravitation, holding the nucleus of an atom together), electromagnetism (which keeps electrons in place around the nucleus, making ordinary matter seem solid) and the weak nuclear force (which causes radioactive decay in certain atoms, like uranium). (John Boslough: Stephen Hawking's Universe)
- grok:** A term coined in Gestalt psychology during the 1960's. Receiving a deep, comprehensive impression of something especially with regard to relationship within the context of a whole. A holistic grasp of information at any level of consciousness. Internal integration of information.
- holism:** A philosophical theory first formulated by Jan C. Smuts which postulates that the determining factors in nature are wholes which are irreducible to the sum of their parts and that the evolution of the universe is the record of the activity and making of these wholes. (Webster's)
- holistic:** The quality or state of holism which emphasizes the organic or functional relation between parts and wholes. (A holistic rather than an atomistic approach to the study of culture) (Webster's)
Reasoning and perceiving from the largest possible frame of reference.
- holoaxial:** A crystal system: having all the axes of symmetry possible.
- holography:** The mathematical principle of holography was discovered by Dennis Gabor in 1947 but a demonstration of holography had to await the invention of the laser. It is a method of lensless photography in which the wave field of light scattered by an object is recorded on a plate as an interference pattern. When the photographic record, the hologram, is placed in a coherent light beam like a laser, the original wave pattern is regenerated and a three dimensional

	image appears. Any piece of the hologram will reconstruct the entire image.
holographic theory:	Our brains mathematically construct "concrete" reality by interpreting frequencies from another dimension, a realm of meaningful, patterned primary reality that transcends time and space. The brain is a hologram interpreting a holographic universe.
	Phenomena of altered states of consciousness (which reflect altered brain states) may be due to a literal attunement to the invisible matrix that generates "concrete" realityAn eerie property of both hologram and brain is the distribution of information throughout the system, each fragment encoded to produce the information of the whole. (Karl Pribram, brain researcher, Stanford University-from "The Holographic Paradigm & other paradoxes)
holohedral:	Having all the faces required by complete symmetry. (Webster's)
holographic universe:	A perspective of the universe transcending space-time; one in which the unified pattern of the whole is reflected in its all of its parts, the totality imbued with the self-sustaining properties of Life as well as the integrating, all-encompassing, self-preserving properties of Love.
implicate order:	David Bohm's physics of holomovement. The theory that consciousness as a whole, the total consciousness of human kind, has a more primary reality; that all of consciousness is enfolded in matter and matter is the unfolding of consciousness. Thus individual consciousness, like an individual electron, is an abstraction. (John Briggs, David Peat: Looking glass Universe)
	A vast and primary level of reality which gives birth to all the objects and appearances of our physical world in much the same way that a piece of holographic film gives birth to a hologram. (Michael Talbot: The Holographic Universe)
explicate:	According to David Bohm, an unfolded order which is normally seen, but not really there; that what appears to be a stable, tangible, visible, audible world, is an illusion.
information:	To inform literally means to put into form or shape. Information is now generally taken to be the source of form or order in the world; information is informative and plays the role of a formative cause, as for example in the concept of "genetic information."
intrinsic:	Belonging to the real nature of a thing; not dependent on external circumstances; essential; inherent.
isomorph:	Something identical with or similar to something else in form or shape or structure.
matrix:	The womb, place of origin, cradle ('the place in which anything is nurtured in its earlier stage', Oxford) source, cause; grid, chessboard pattern.
	A schematic model of order displaying columns and rows or lines, which are constructed according to definite rules. The essential requirement is that all elements in a column or row possess a common characteristic. Thus a matrix is a rectangular array with columns (vertically) and rows (horizontally).

The columns are indicated by an index, the rows or lines by another. Where a column crosses a row, a point of intersection is formed - a matrix element - providing specific information about the subject of the matrix. With this tool all the most relevant aspects of a subject can be systematically arranged into one coherent "model of order", thereby revealing the structure of the subject in the simplest and most comprehensive way. (Study Guide, pg. 96 & The Science of the Oneness of Being, Pg. 255, Kappeler)

- matter:** physical substance. material constituent; esp: substance that is considered to constitute the observable universe, that together with energy is held to form the basis of objective phenomena, that includes among its properties extension, inertia, and gravitation, and that is indicated by experimental evidence to consist ultimately of elementary particles of comparatively few kinds. (Webster's)
- That which has traditionally been contrasted with form or with mind. In the philosophy of materialism, matter is the substance and basis of all reality, and is usually conceived of in the spirit of atomism. In Newtonian physics, matter, distinguished by mass and extension, was contrasted with energy. According to relativity theory, mass and energy are mutually transformable, and material systems are now regarded as forms of energy. (Rupert Sheldrake)
- memory:** The capacity for remembering, recalling, recollecting, or recognizing. From the mechanistic point of view, animal and human memory depend on material memory traces within the nervous system. From the point of view of the hypothesis of formative causation, memory in its various forms, both conscious and unconscious, is due to morphic resonance. (Rupert Sheldrake: The Presence of the Past)
- model:** Structural design. Pattern, paradigm, example, representation, ideal. Something perfect of its kind. Pattern may suggest a clear or detailed archetype or prototype. Exemplar indicates either a faultless example to be emulated or a perfect typification. Ideal indicates the best possible exemplification either in reality or in a mental conception.
- mode:** Manner or form of being, doing, etc., way.
- rheomode:** Coined by David Bohm ("Wholeness and the Implicate Order") by combining the Greek word 'rheo' meaning 'to flow' with 'mode' in order to develop a language in which movement has first priority in our thinking, allowing the verb to play a primary role.
- *resonate:** Rheomode language, altering the noun 'reason' in order to convey a resonant state of reason. The reverberation of Mind.
- *revelate:** Rheomode language, altering the noun 'revelation' in order to convey the Self-revelatory capacity of Being.
- *relevate:** Rheomode language, re-elevate, meaning 'to lift into attention' so that the content thus lifted stands out in relief.
- monographic:** mono: one; graph: letter. One letter at a time. One place value at a time. The consideration of one isolated, separated part in distinction to the consideration of the integrated whole.

- morphic fields:** A field within and around a morphic unit which organizes its characteristic structure and pattern of activity. Morphic fields underlie the form and behavior of holons or morphic units at all levels of complexity. The term morphic field includes morphogenetic, behavioral, social, cultural, and mental fields. Morphic fields are shaped and stabilized by morphic resonance from previous similar morphic units, which were under the influence of fields of the same kind. They consequently contain a kind of cumulative memory and tend to become increasingly habitual. (Rupert Sheldrake: The Presence of the Past)
- morphic resonance:** The influence of previous structures of activity on subsequent similar structures of activity organized by morphic fields. Through morphic resonance, formative causal influences pass through or across both space and time, and these influences are assumed not to fall off with distance in space or time, but they come only from the past. The greater the degree of similarity, the greater the influence of morphic resonance. In general, morphic units closely resemble themselves in the past and are subject to self-resonance from their own past states. (Rupert Sheldrake: The Presence of the Past)
- morphogenesis:** the formation and differentiation of tissues and organs. (Webster's)
the coming into being of form. (Rupert Sheldrake: The Presence of the Past)
- morphogenetic:** relating to or concerned with the development of normal organic form.
- mutation:** A sudden change. Mutations are observed in the phenotypes of organisms, and can generally be traced to changes in the genetic material. The term mutation is now generally taken to mean a random change in gene. Mutation is essential to evolution being the ultimate source of genetic variation.
A sudden remodulation of the factors producing the expression of life.
- omnipotent:** omni: all; potent: power; Almighty; all powerful.
- omnipresent:** The state of being present in all places at all times.
- omniscient:** Having infinite awareness, understanding and insight.
- organism:** A complex structure of interdependent and subordinate elements whose relations and properties are largely determined by their function in the whole. An individual constituted to carry on the activities of life by means of organs separate in function, but mutually dependent: a living being.
- paradigm:** A universally recognized scientific achievement that for a time provides model problems and solutions to a community of practitioners. (Thomas Kuhn: The Structure of Scientific Revolution) A framework of thought; a scheme for understanding and explaining certain aspects of reality.
- paradigm shift:** A distinctly new way of thinking about old problems. A new principle is introduced, a new and more comprehensive perspective taken. (Marilyn Ferguson: The Aquarian Conspiracy) A major shift in consciousness.
- pattern:** A fully realized form, original or model accepted or proposed for imitation. Archetype; plan; a natural configuration.

- prism:** A transparent body bounded in part by two plane faces that are not parallel used to deviate or disperse a beam of light; something that refracts light or produces an effect suggestive of a spectrum.
- space-time:** (space-time continuum) A geometry that includes the three dimensions and a fourth dimension of time. In Einstein's concept of the physical universe, based on a system of geometry devised by H. Minkowski, space and time are regarded as entwined, so that two observers in relative motion could disagree regarding the simultaneity of distant events. In Minkowski's geometry, an event is identified by a world point in a four-dimensional continuum.
- stroboscope:** Gk 'strobos', action of whirling + 'scope', the field of vision. Ability to envision or focus upon; specific configurations within the whole; actualizing the form of those configurations.
- structure:** from 'structura' = to arrange, to fit together, ordering
"Something having a fixed pattern of organization; arranged in a definite pattern. "The interrelation of parts as dominated by the general character of the whole." "A self-stabilizing energy event complex." Buckminster Fuller: Synergetics)
- structural integrity:** Sound; undivided; adhering to code. (Webster's)
- synchronous:** Happening, existing, or arising at precisely the same time. (Webster's)
- synergy:** "syn" = together, "ergon" working = to work together. "the behavior of whole systems unpredicted by the behavior of their parts taken separately."
- synergy principle:** "the whole is an immaterial network of relationships which make the whole greater than the sum of its parts."
- synergetics:** "integrated behaviors instead of all the differentiated behaviors of nature's galaxy systems and galaxy of galaxies." (Buckminster Fuller: Synergetics)
- system:** "A complex unity formed of diverse parts subject to a common plan or sensing a common purpose." " an aggregation or assemblage of objects joined in regular interaction or interdependence." "An orderly working totality." (Websters)

"The component events of an aggregate exist and operate in unison or concord according to a coherent plan for smooth functioning." (Buckminster Fuller: Synergetics)

Systems are integrated wholes whose properties cannot be reduced to those of smaller units." "Natural systems are wholes whose specific structures arise from the interactions and interdependence of their parts." (Fritjof Capra: The Turning Point)
- time:** A dimension that enables two otherwise identical events that occur at the same point in space to be distinguished. The interval between two such events forms the basis of time measurement. For general purposes, the earth's rotation on its axis provides the units of the clock and the earth's orbit round the sun provides the units of the calendar. For scientific purposes, intervals of time are now defined in terms of the frequency of a specified electromagnetic radiation. (Concise Science Dictionary)

ubiquitous: Existing or being everywhere at the same time: constantly encountered.

universe: "The comprehensive, historically synchronous integral-aggregate system."
(Buckminster Fuller: Synergetics)
